Mast Rotator for APAC Winch-Up Masts

MPN
AP-TM-RH360

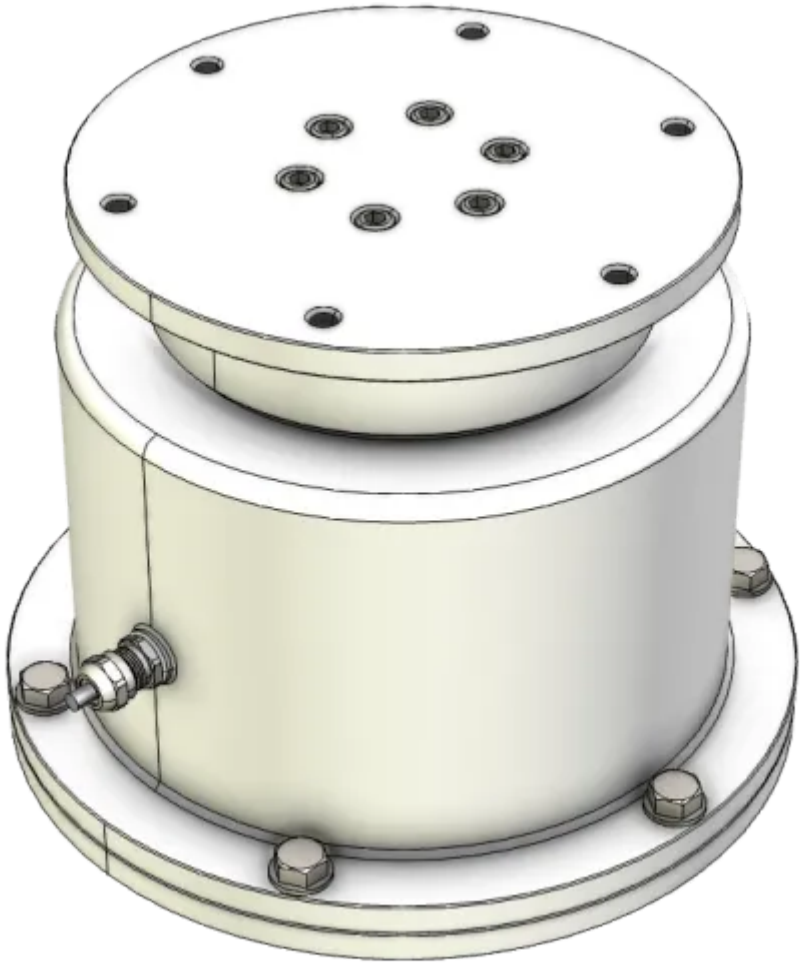

Description

This is a subcomponent used as part of Winch-Up Masts to provide equipment alignment. It is not ordinarly available separately, but can be custom ordered in.

The rotator is powered by DC and capable of performing a full 360 degree rotation, with the direction controlled by switching polarity. The standard rotator does not implement a slip-ring for continual rotation, as equipment is typically mounted to a choice of headframes that are bolted on top of the rotator.

The rotator implements a 6-Bolt Rotator Bolt-Pattern attachment interface.

Customised rotators are available on request.
